Frederick W Whitehouse Collection

Size	23 boxes
Contents	Geological papers and reports, correspondence, maps, and photographs. Also includes geological study materials prepared for high schools, financial records, and papers prepared for the Queensland Naturalists' Club.
Biography	<p>Frederick William Whitehouse (1900 – 1973) was a Queensland geologist. Whitehouse completed a Bachelor of Science at the University of Queensland in 1922 and was awarded the Government Gold Medal in Geology that year. He completed a Master of Science in 1924. Receiving a University Travelling Scholarship to St John's College, Cambridge, he gained his PhD there in 1925 with a thesis on marine Cretaceous sequences in Australia. Returning to Australia, Whitehouse was appointed Queensland Government Geologist in the Department of Mines in 1925. The following year he took up a position as lecturer at the Department of Geology at the University of Queensland. He was awarded the degree of Doctor of Science by the University of Queensland in 1939. In 1941 Whitehouse enlisted in the Australian Imperial Force, and primarily applied his knowledge to road-building activities in Queensland and New Guinea. Following the war, he was seconded to the Department of Co-ordinator-General of Public Works and was on the committee of post-war reconstruction. In 1948 he returned to lecturing at the University and was promoted to Associate Professor in 1949. His most important work was on the Cambrian faunas of North-Eastern Australia and on the Great Australian Artesian Basin. Whitehouse resigned from the University in 1955 following a charge of committing an act of gross indecency with a minor. A conviction was overturned by the High Court 1957. Whitehouse continued to work as a consulting geologist until his death in 1973.</p>

Box 7**Westland Oil Company Ltd**

The aim of this company was to acquire an Authority to Prospect an area of approx. 5,000 square miles known as Westland area South of Longreach (Warbreccan) and to prospect and develop the oil fields. Frederick Whitehouse was Consulting Geologist for the Company.

Newspaper articles of the time show that in 1955 the company was confident of oil finds in the Longreach area, saying there were 'outstanding oil chances on Warbreccan'. Three wells were drilled during 1955. On 21 June 1956, however, the company was reported as being in liquidation, unable to pay its debts.
