## Richard Sylvan Papers

<b>Size</b>	172 boxes
<b>Contents</b>	Correspondence, manuscripts, publications, research material compiled on various philosophical subjects.
<b>Biography</b>	Richard Routley, who later changed his name to Richard Sylvan, was a philosopher and key figure in research on relevant logic, non-standard logic and environmental philosophy.
<b>Notes</b>	Unrestricted access Arranged by subject with cross-references to file number. The index of file numbers included at the end of this document was compiled by Sylvan's literary executor prior to transfer to the library. Material in boxes 159 to 172 were passed on to Dr Ross Brady after Sylvan's death in 1996. Brady edited the second volume of Sylvan's book <i>Relevant Logics and their Rivals</i> , published in 2003.

### Richard Sylvan's Papers

There are any number of excuses that need to be made about the accompanying list of Richard Sylvan's papers. It was compiled during a month's work at Como (Sydney), Lake George (Bungendore) and ANU in November and December 1996. Anyone who knew Richard's work would have expected him to leave a large collection of papers, and no one who knew him personally would have expected them to be well-filed. Even so, I was amazed at the huge mass of papers he had accumulated and at his method of arranging them in piles (roughly according to topic) on every available flat surface.

Taking my lead from Richard's later terminological innovations, I shall call the mereological sum of his papers as I discovered them in November 1996, the Masse. The Masse, like the Wholle of Richard's plurallist metaphysics, can be articulated in many different ways. Unlike the Wholle, of which Richard provided thick and thin versions, the Masse is uncompromisingly THICK. The accompanying list (henceforth: the List) is in no sense a catalogue of the Masse, as the notes that follow will make clear.

### 1. Main purpose of the list

Richard died leaving many current projects incomplete. Indeed, there's a sense in which all his projects were current; for he continued to accumulate papers and notes connected to things he had published years ago (e.g. on item theory). Much of his on-going work was collaborative and there is hope that several pieces of work can be brought to completion by his collaborators. His projects often adjoined or overlapped one another: e.g. the second volume of *Relevant Logics and their Rivals* and a book on applications of relevant logic (*Relevant Applications* or *Relapse*, as he labelled some of the files); also several not clearly demarcated projects in environmental philosophy.

The main purpose of my work was to try and facilitate the completion of as much of his on-going work as possible.

The first step towards this (and really the only one that I had time to make substantial progress with) was to number and list all the papers "as I found them". (Even this step was not completed by the time I left: see §3 below.) The papers obviously all had to be moved, and many of them would eventually have to be sent to different people to work on. Before moving them, it was desirable to make a list indicating where they were found, so that any information, about how Richard had arranged them, which was lost on moving the papers, could (ideally) be recovered from the List. Richard tended to keep the papers around his workspaces piled roughly according to topic – though in some cases, only Richard or a collaborator would be able to see how.

The List is, therefore, a "geographical" articulation of the Masse. Its three main sections list the papers found in the three places – Como, Lake George and ANU – where Richard worked (or in the case of ANU, stored papers).

Within each of these sections the papers are further listed by location (e.g. on the desk, on a filing cabinet, on the floor) and then by pile. Each document or group of documents was numbered with a number stamp and a rough description of it recorded in the List. Documents in neighbouring locations, therefore, have neighbouring numbers. (That a document was found on the floor rather than on a table is not in itself of any importance. But the relative positions of papers sometimes may be, since papers can stray from pile to pile, and sheets can become detached from typescripts. Those working on Richard's *Nachlass* who think that some papers they need are missing should check adjacent documents, which can be identified from the List.)

The ANU listings get a bit chaotic because it was necessary to move the furniture to get at some of the material.

## 2. Temporary Storage of the Papers.

After listing, the papers were collected in boxes, very roughly according to topic, and moved to Louise's house in Woronora Heights. *The papers, therefore, are not stored in the order in which they are numbered on the List.*

There are certainly disadvantages in this, for it makes it much more difficult to actually find a particular paper that you've identified from the List. On the other hand, it could hardly be avoided,

since certain topical groups of papers had to be extracted from the Masse for people to start working on them.

Four such groups of papers have been removed: (i) the material on *Relevant Logics and their Rivals*, which is with Ross Brady; (ii) the material on *Relevant Applications*, which is with Dominic Hyde; (iii) the material on *Green Ethical Fields*, which is with David Bennett; (iv) material on *Ventures in Epistemology* and current material on *Deep Plurallism/Transcendental Metaphysics*, which I have. Other boxes of papers have been assembled for possible use by other researchers at a later time (e.g. collections on significance logic, item theory, and various environmental topics).

The disadvantages of this method of storage have been mitigated by Louise, who, for each box of papers, has made a list of the file numbers of the documents it contains. [NB: This list is available from the Fryer Library, The University of Queensland, where Richard's papers are stored.] It is hoped that this will be a temporary expedient until the papers can be properly catalogued and stored in an appropriate institution.

### 3. Limitations of the List.

Time constraints made it impossible to catalogue each item fully or even individually. Several filing cabinets at ANU contained old material that had already, in some rough sense, been archived. That is, the papers had been sorted and filed in labelled folders, probably by a research assistant. I did not have time to list this material, nor even to make more than a cursory check of whether the labels matched the contents of the files. The files were removed from the filing cabinets and stored in boxes, and the general contents of the entire drawer noted in the List (see p. 76 of the list for some examples). In addition, a large amount of old manuscript was warehoused in cartons in the garage at Lake George. This has not been listed at all.

The List, therefore, is seriously incomplete. Even where numbers were assigned, it was impossible to assign them to every document: there were just too many documents. It is most complete for the material at Como, where I had more time. There, although I would number a folder rather than the documents within it, I had time to list the main documents inside. At Lake George and ANU I had to resort to merely listing the folders with a broad indication of their contents, and sometimes to bundling related documents together into folders for numbering. (The notation '<supplied>' in the List means that I supplied the folder; all other folders, binders, box files, and supermarket bags had been used by Richard. The notation 'clipped bundle' means that Richard had collected the papers together with a bulldog clip or something similar.)

The information included on each listed item varies. Generally, I tried to include the author's name and the title (often abbreviated) or at least an indication of subject matter, and an indication of whether it was an offprint, a xerox copy (xc), a typescript (ts) or a manuscript (ms). If Richard had written on the document I called it 'marked', if it was by someone else; or 'corrected', if it was one of his own typescripts. *Warning:* My good intentions in this regard, which started at Como, were frustrated by the sheer scale of the Masse at Lake George and ANU, where, alas, my annotations peter out. There was not time to look through each document to see if it was marked or corrected, most of the information I give was what I could glean from the first page (sometimes, that didn't

even include the author's name).

[Note: In identifying Richard's typescripts I usually went by their appearance – they rarely carried his name on the first page. So I may have attributed tss to him which were in fact by someone else simply because they looked like his. I have probably also missed the names of co-authors. My apologies to all those whose work has been overlooked in these ways. The List should not be used for a determination of copyright! There was, however, no difficulty in identifying Richard's manuscripts as his!]

For the last few years, Richard's typist had adopted the very useful practice of dating his various drafts. I've recorded this information, where it's available.

#### 4. Consistency of the List.

The List is very rough. There was no chance to check my work; and there was no time to plan the List carefully. The sort of entry I made changed as I worked through the Masse (and as I ran out of time). On my return to Canada I did read through the list, correcting typos, and making copy-editing changes, etc. But, of course, I had no way of checking my entries against the original document. (Doubtless many typos still remain.)

Not all the numbers on the List have a document corresponding to them. These numbers are noted as "not used". These resulted either from a malfunction of my numbering machine or from the fact that the document to which I originally assigned the number turned out to be part of some other numbered document.

#### 5. Abbreviations.

I used a great many abbreviations, most of which (I hope) will be obvious (at least to those familiar with the relevant parts of Richard's work). Thus, e.g., 'DE' for 'Deep Ecology'; 'DG' for 'Deep Green'; 'Env' for 'Environment(al)'; 'Rel' for 'relevant/relevance'; 'thy' for 'theory'.

I shortened titles in what I hope are ways that will enable people familiar with the field to recognize them.

The names of authors who frequently appear on the List are contracted: 'RS' for Richard Sylvan; 'RKM' for Bob Meyer; 'VP' for Val Plumwood. (I made no attempt to distinguish items Richard wrote as Richard Routley from those he wrote as Richard Sylvan. Similarly for Val.)

Remember: The List is a hurriedly compiled document containing many errors. It is intended only as an interim guide to Richard's *Nachlass*. I hope it proves useful.

Questions about it should be directed to:
